1-click actions
BW Conversion action

The action set comprises 4 separate actions.

General use

Same as above but
smoother tones—good for
portraits.

Same as above but add a
"skin-improvement" layer.

Harsher tones than above
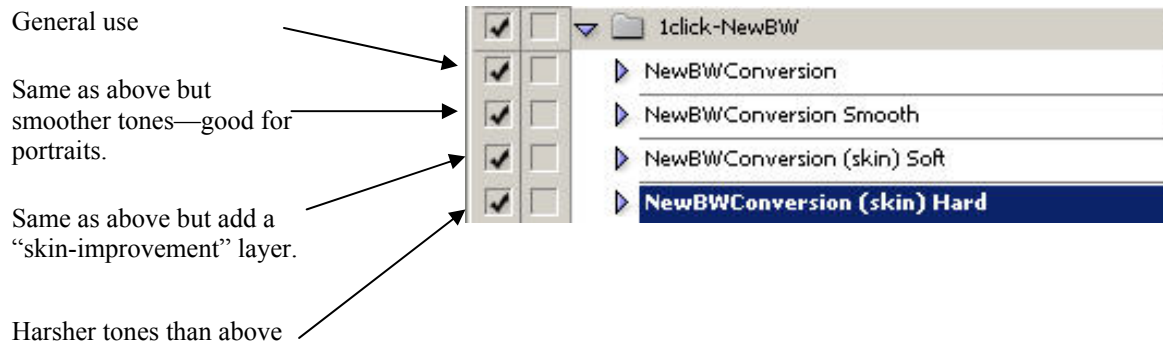

The action works on RGB images in 8 or 16 bit mode. The image should be flattened to start with.

Turn on these layers to add warm or cool tones to your image,
you can adjust the opacity to suit

Converts to BW—reduce the opacity for partially desaturated
images or turn off for color.

Paint on the layer mask to soften/lighten skin tones (do this last!")

Adjust opacity to control highlight details.

By default the images are slightly HighKey—adjust this layer's
opacity to modify the strength of the HighKey effect.

Change the opacity of this layer to modify contrast.
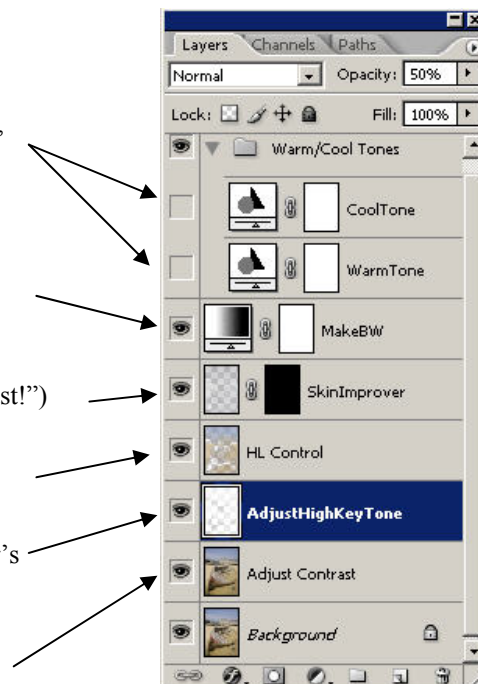

If you use the Skin Improver layer make sure you paint on the mask as a last step—ie after using HL Control
etc).
