

QUICK LAYOUT ACTIONS (Print version) – USER GUIDE

The 1-click actions QUICK LAYOUT for PRINTS (QLP) actions are designed to quickly generate a template for page layouts suitable for printing.

The actions create page layouts in a range of formats for 10in x 8in, 11in x 14in and 12in x 16in print sizes.

The action creates the layouts and prompts you to select and insert images for each section of the template.

You also have the option of white or black borders around each image. By default the action sets up black borders but after running the layout actions you can then run the “MakeWhiteBorders” action to convert the borders from black to white. The “MakeBlackBorders” converts back to black from white.

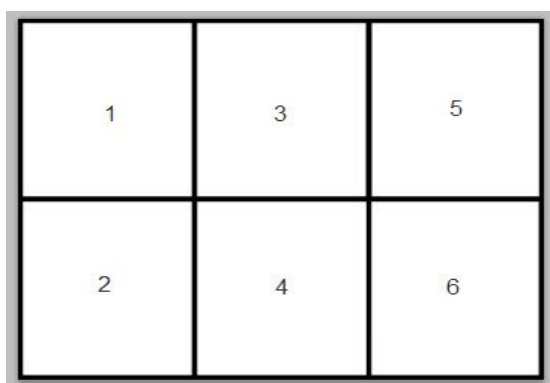

The basic workflow is the same as the original QuickLayout action set and you may find it useful to download the original User Guide from <http://www.1clickactions.com/pdfs/QLGuide.pdf>

We hope to extend the number of templates available but the initial set contains over 30. The numbers on the templates on the next page are not included in the actions but are shown here to indicate the order in which the images are added.

The actions will prompt you for each image and indicate the position as the action is run. You will need to resize each image to fit the template and it is useful to hold the SHIFT key as you resize an image so that the aspect ratio remains the same.

The actions are named to indicate the page size and also the number of images required.

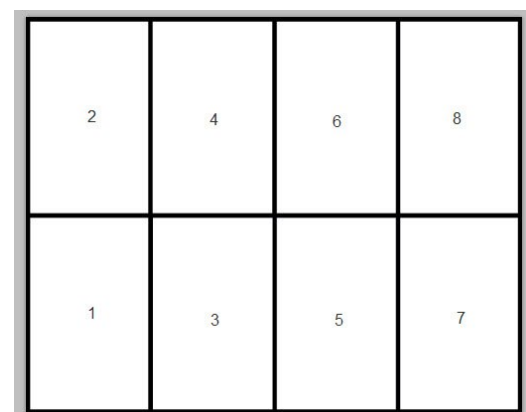

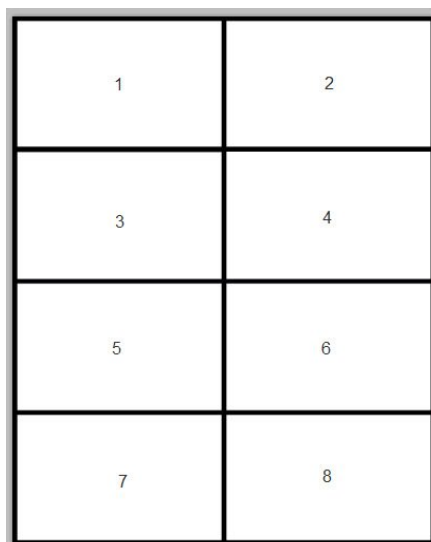

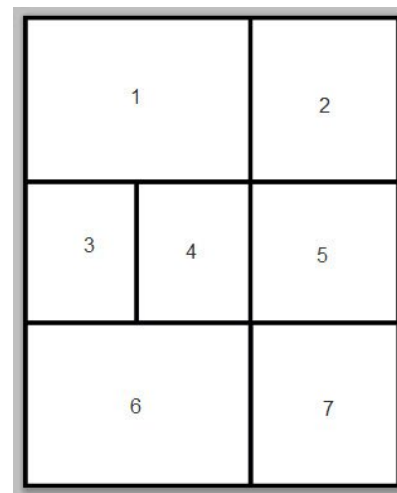

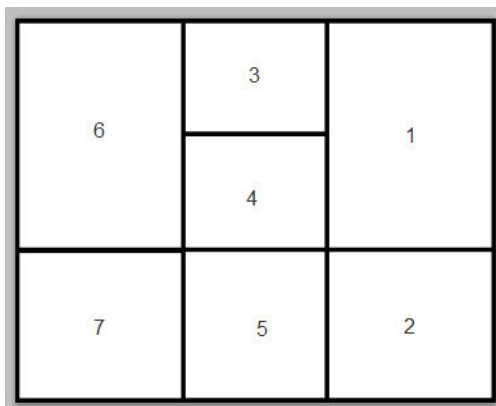

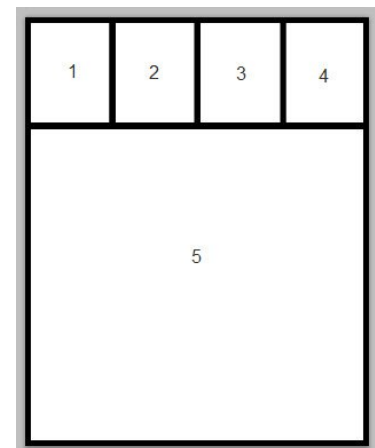

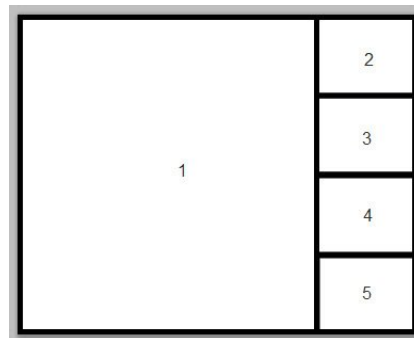

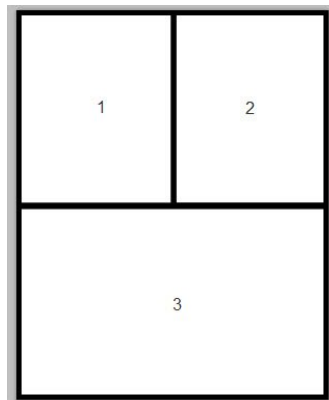

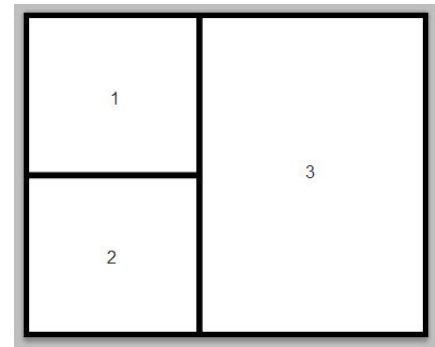

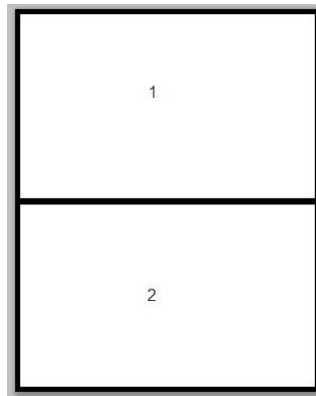

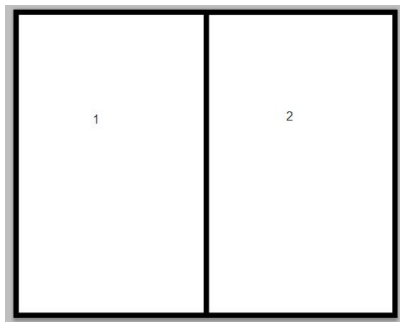

For example the action “1click14x11-6Horizontal” would create layout 14inches by 11inches that had 6 images and was in a horizontal (landscape) format as shown below.

You do not need to have any image open when you run the action. The action will create a new document for you, create the layouts and then prompt you for images when necessary. To make things quicker it is a good idea to have all the images you intend to add in the same folder although this is not essential.

The QLP Templates.
