

File Folder MOCK-UP.

All main elements are grouped in folders with clear object names

Some folders contain subfolders named **OVER EFFECTS** or **UNDER EFFECTS**, which contain layers that make some special effects over / under your content - like shadows & highlights.

turn off visibility by clicking the eye icon  for **UNDER EFFECTS** if you don't want shadows under the objects.

here we have 2 paper versions, choose one and turn off visibility for other

Every **CLONED SMARTOBJECT** is colored **yellow** - you don't need to edit them, they change automatically.

here we have colors for our folders, you can chose your color using color picker this elements change the overall object color - it's useful especially on edges

Shadow effects, universal for any background textures

Ready background with textures

SMARTOBJECT for background, here you can put your background textures

* Experiment with **TEXTURES** opacity to get the best results for your content shadows & highlights

* Remember that only one from **TEXTURES** subfolders should be visible
