

Flip Displays Set

A set of 12 flip displays suitable for displaying days, time, downloads, visitors, prices, event dates (for example, website launch) or any other information. Displays: short date, full date, two counters and two clocks (all in two colors and on two different backgrounds). In addition all these displays are made in 3 sizes: large, medium and small. There's also a design for highlighting day in the date displays.

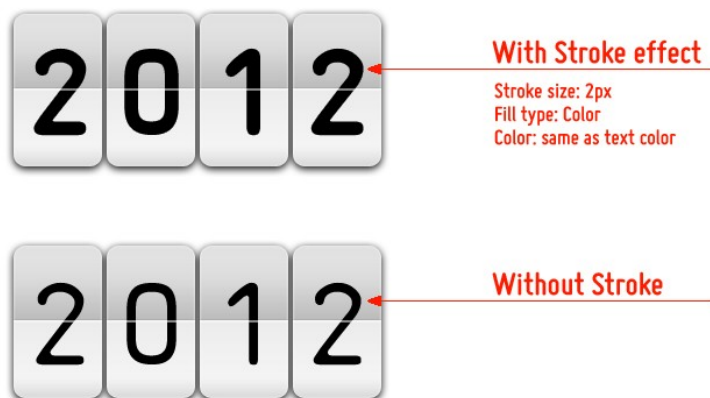

- All elements are on separate layers which are grouped into layer groups;
- The font used in the displays is SV Basic Manual. It's free, so you won't need to spend extra money on buying the font. You can download it from www.dafont.com;
- Easy editable text;
- You can use any other font. Works best with monospaced (fixed-width) fonts.

What's included:

- Two PSD files (white and black);
- Two JPEG files (white and black);
- Instructions in readme.pdf (this file);

The display text and Stroke effects

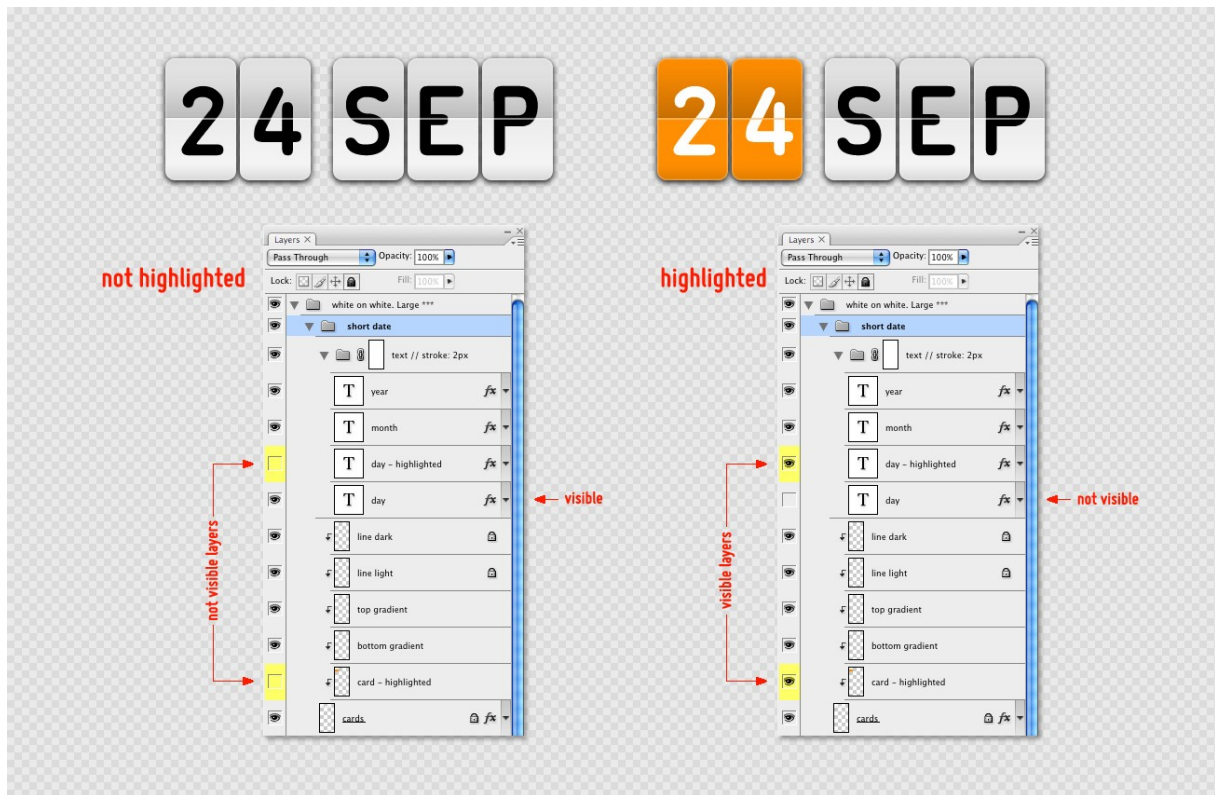

The font used in the displays is SV Basic Manual. To make the text look bolder Stroke effect is applied. On bigger text there is 2 pixel Stroke, on smaller - 1 pixel. If you want to change color of the text (with stroke) remember that you'll have to change the color of the stroke too. Just make the Stroke Fill and text colors the same.

To change the stroke effect, make sure the Layers palette is visible (Window > Layers). Select the layer with text, right click on it and choose **Blending Options...** Effects window will pop up. On the left click on **Stroke** tab. Here you will find options for Stroke Size, Stroke Color and other.

How to enable highlighted day in the date displays

There are additional layers with design for highlighting the day in the date display. They are marked in yellow. Make these layers visible (named "day - highlighted" and "card - highlighted") and "day" - invisible. That's it.

Thank you for purchasing **Flip Displays Set**
