

# Stunning Header & Navigation Pack

This stunning header & navigation pack is created using Adobe Photoshop and is presented in a single PSD file split into manageable colour schemes.

## What is included

Included is one PSD file with 13 different colour schemes. Included in each colour scheme is the full header, complete with logo area, user menu, main tabbed navigation, and the sub menu below. The sections are split into easy to navigate groups and are all named conveniently.

## Font

The font used for this menu pack is Helvetica Neue, but Helvetica, or Arial would suffice.

## Further Information

- The actual size of this header pack is 1020 x 167 px, and is built to be easily slotted in to the [960.gs](#) grid system commonly used for websites.
- Creation of new colour schemes is easy, no elements need to be changed or deleted, you can simply apply new colours to the vector shapes, and to an elements blending options.

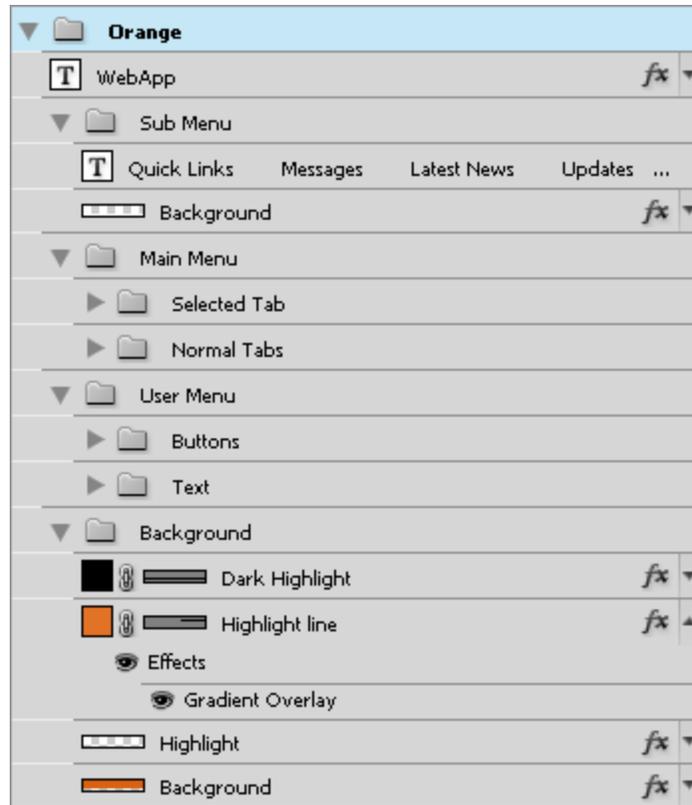

## What can be edited

Creation of new colour schemes is easy, mainly the things you will want to change are the drop shadow on text, and most of the layers named background, highlight, or dividers. Vector elements colours can be changed by double clicking the coloured box next to them, and layers with blending options enabled can be changed by double clicking them and observing what blending options are enabled.

Modifying text is easy, and is achieved by simply double clicking on the text icon next to text layers, or picking the text tool, and clicking on the text on the actual screen to edit.

## Grouping format

The grouping format for layers is very straight forward and self explanatory. Here is a screenshot of how the grouping is layed out in photoshop.

## Further help

If you require help further than the scope of this simple help file, please contact me via email at [matt@qwibbledesigns.co.uk](mailto:matt@qwibbledesigns.co.uk).

Enjoy,
