- Various options for **photo galleries**.
- Paragraph and character styles.
- Three individual layers for guides, texts and graphics.
- Easy color update.
- Autonumbering.
- Automatically updated section marker.
- Base grid for texts of the paragraph.

# FAQ

## How to apply a master page

There are various ways to do it, as follow:

1. Drag the master page directly on the preview of the current page.

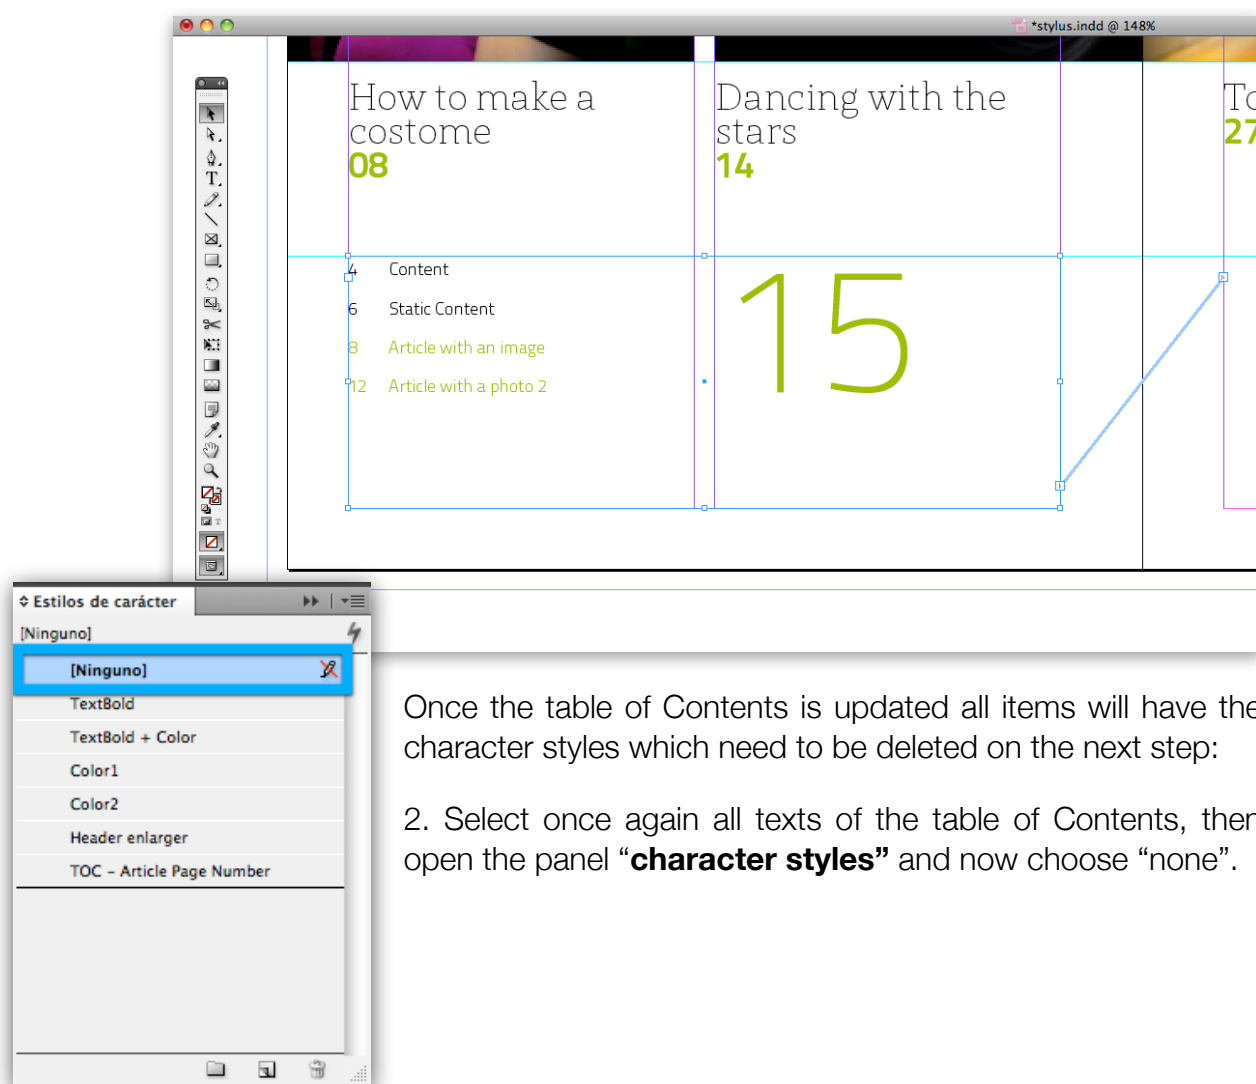

2. By pressing right click on the current page and select the option “Apply Master to Pages”.

## How to update the dynamic Table of Contents

This is very easy, but in order to have a better result It's recommended to have all the content finished and then create the table of content. Follow the next steps:

1. Select all texts from the part that contains the table of content and choose **Composition > Update table of Contents**.

Once the table of Contents is updated all items will have the character styles which need to be deleted on the next step:

2. Select once again all texts of the table of Contents, then open the panel **“character styles”** and now choose “none”.

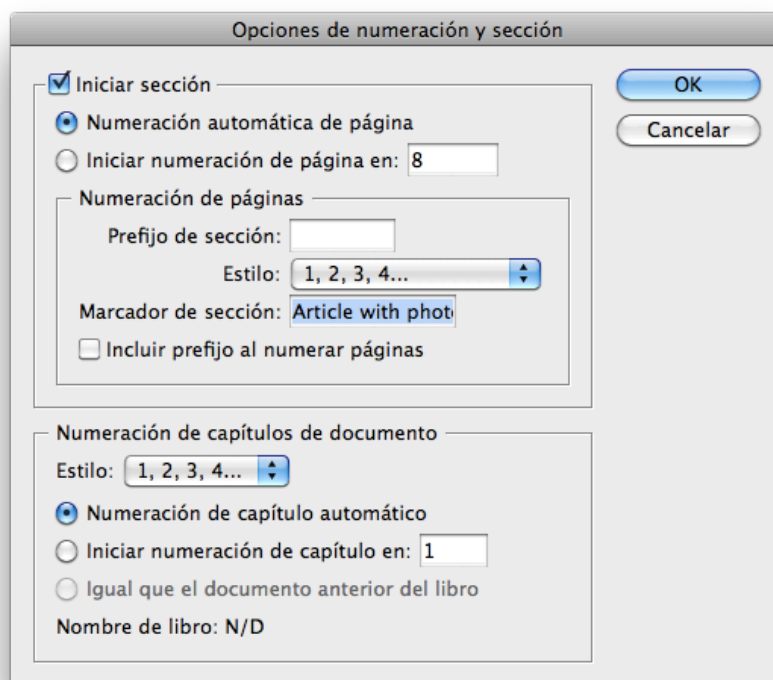

## How to change an image.

Select the image and open the **link panel**, automatically on the list appears the current image selected, after that, press the button **relink** and looks for the new image.

## How to change section markers and numbering

Select a page and choose: **layout > Numbering and section option** or also by clicking on the contextual menu of the **page panel** and choose the option **Numbering and section options**.
