

How it works

Open the text effect you wish to use. In the layers pannel there is 1 layer called "Your text or logo here (double-click the layer thumbnail)", Double click the layer thumbnail or right click on the layer and select "Edit Contents". A message will appear, click "OK". A new window will open, replace the text with your own or use a different font and then close the window, a message will appear asking if you want to save, click "Yes" and you are done! It also works with vector shapes, logos etc.
