

Hello and thank you for purchasing this file :)

In this package you will find a unique Twitter theme conceived with designers in mind.

To insert your own images simply open the .psd, double click on the smart objects and place your pictures, then Save & Close the smart object and let Photoshop do the trick. Your pictures will be automatically resized to match the layout of the page.

The font used is [Bradley Hand ITC](#) but you can use any other font you like :) You can also download the social media icons from [Komodo Media](#).

This background works best in 1680x1050 resolution, but all the objects are easily editable, simply drag them around to adjust the layout to the resolution of your choice.

To change your Twitter profile all you have to do is log into your account, then go to Setting>Design and all the way at the bottom you will find the Change background Image option. Click on it, then browse to your image on the hard drive (in .jpg, .gif or .png format) > Save Changes and you're done.

For best results I recommend also changing the default design colors of your twitter theme. To do that, navigate to Setting> Design and click on Change Design Colors. There, change the color codes to the following: Background - #22201b, Text - #210a00, Links - #b35f00, Sidebar - #ebe5c8, Sidebar Border - #d6c4af.

Have fun and remember to [check out](#) my other files on Graphic River. If you enjoy this file, please rate it.

Thank you,
Alina
