ACTIONS POWER TIP: ADD AN ACTION TO YOUR ACTION

Here's an Actions power tip: Did you know that you can build an action that will include an existing action? Here's how it's done: As you're recording your action, just go to the Actions palette, click on the existing action you want to include in your current action, and press the Play button at the bottom of the Actions palette. The existing action will now be added as a step in your current action (pretty scary stuff).
