Description of the action's functions:

Addons

1. *Smart Saturation* allows you to progressively increase image saturation. Use eyedropper tool to select a color on the image that you want to make more saturated and play action. As a result of using smart saturation the selected color becomes most saturated and other colors become less saturated. Such increase in saturation makes the result more accurate without any technical artifacts. Play with Smart Saturation group opacity to achieve the desired effect.

2. *Smart Desaturation* allows you to progressively decrease image saturation. Use eyedropper tool to select a color on the image that you want to make less saturated and play action. As a result of using smart saturation the selected color becomes less saturated while the rest of the colors become a bit more saturated. Such decrease in saturation makes the result more accurate without any technical artifacts. Play with Smart Saturation group opacity to achieve the desired effect.

3. *TRY ALL Color Look Actions*

4. *Super HDR action*

HDR and Contrast

1. *HDR makes highlights* darker and shadows lighter. Allows increasing the dynamic range.

2. *Mid Tones Contract* adds more contrast to the image in midtones and hardly affects highlights and shadows. Use Curves adjustment layer to change Tonal Contract.

3. *Mid Color Contract* adds more contrast to the image in midtones and hardly affects highlights and shadows. Use Black & White adjustment layer to change Color Contract.

4. *Auto Histogram* contrast adds more contrast to the image and automatically finds true black and white points.

5. *Make More Brighter* makes midtones and highlights brighter and slightly darkens the shadows.

6. *Highlight recovery* makes highlights darker.

7. *Shadows recovery* makes shadows lighter.

8. *Lights detailed* makes highlights lighter and more detailed.

9. *Darks detailed* makes shadows darker and more detailed.

10. *Volume HRLA* increase the volume of the entire image.

Color

1. *Smart White Balance* automatically adjusts White Balance on an image. Play with layer opacity to adjust white balance.

2. *Make All Warm makes* colors of an image warmer. It's well suited for wedding and kids photos.

3. *Make Shadows Cool* makes shadows of an image cooler. It's well suited for fashion photos and stylish toning effect.

4. *Desaturate* makes shadows less saturated and a little bit darker. It allows you to decrease excessive saturation that can be in digital photos.

5. *Desaturate heavily saturated* allows to reduce saturation level of the most saturated colors on the image. You can play with the adjustment layer Vibrance to increase or achieve the opposite effect.

6. *Saturate slightly saturated* increases the intensity of the more muted colors and doesn't affect well-saturated colors. You can play with the adjustment layer Vibrance to increase or achieve the opposite effect.

Improve the Skin and Details

1. *Uniformity Skintone* reduces amount of extraneous colors on the skin and makes green color a little cooler.

2. *Soften Skin Contrast* makes skin less contrast. The lightest areas on the skin become darker and darkest become lighter.

3. *Soften Skin* makes skin smoother and glossier.

4. *Clarity* increases the amount of details in the image. It's a helpful tool to use when editing male portrait or landscape.

5. *Boost Details* increase the volume and details of the entire image.

6*. Sharp* increases the sharpness of the image. Large details increases large details. Medium details increases medium details. Small details increases small details. Play with opacity of the group to achieve the desired effect.
