

How it works

Open the text effect you wish to use. In the layers pannel there is 1 layer called "Your text or logo here (double-click the layer thumbnail)", Double click the layer thumbnail or right click on the layer and select "Edit Contents". A message will appear, click "OK". A new window will open, replace the text with your own or use a different font and then close the window, a message will appear asking if you want to save, click "Yes" and you are done!

It also works with vector shapes, logos etc.

Use the Adjustment to change background colors. Double click the thumbnail of the adjustment layer called "Change Color" to edit.

Fonts

Arial - system font

Important tips

Layer styles tend to look best on bold fonts & large sizes. If you find that your styles aren't looking quite right, you might try a different font.
