

HELP

Content of Use

7 Silver Styles Premium

Thank you for choosing this Silver text style as one of your text style assets.

Here is what you get :

1. 7 Silver.psd file with editable text (1770px x 5322px) with 7 Silver text styles layered, WYSIWYG
2. 7 Silver Styles.asl file with 7 Silver text styles.
3. Help File (Important to read first before you start)
4. Preview .jpeg

First **you must install the font** used as you can download on the link below before you open the Photoshop program for the same result with my preview jpeg, but you can change the font type as you like. I recommend you to use bold font type for the **BOLD SUIT** and use the thin font type for the **THIN SUIT** for best result.

No.	Styles	Font Type	Download Link
1	Armo	Af Pepsi	http://www.fontspace.com/abstract-fonts/af-pepsi
2	Bond 07	Gautami	http://fontzone.net/font-details/gautami
3	Wozd	Vermin Vibes 2 Black	http://www.fontspace.com/nal/vermin-vibes-2-black
4	Box	Baby Blocks	http://www.fontspace.com/ryan-neaveill/baby-blocks
5	Guard	Centaur	http://fontzone.net/font-details/centaur
6	Goxxi	Century Gothic	http://www.freefontsdb.com/detail/8274/Century-Gothic
7	Rock	Centaur	http://fontzone.net/font-details/centaur

Apply The Effects

1. Open "7 Silver.psd" file, click type tool  and then click one of the text that you want to edit, block all

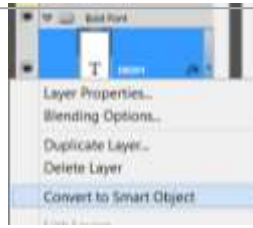

and change the letter and if you can change the font type. (Do not Change the font size).

Important : Do not **Scale** or **change the font size** before you convert it into a smart object, for best result you have to create a smart object after you change the letter (and the font type) by right click the layer and choose "**convert a smart object**". After that you can free to resize / scale your text with a great result by transform the object, "**edit >> transform>>Scale**" or the shortcut "**CTRL + T**". And then drag it into your other .psd File.

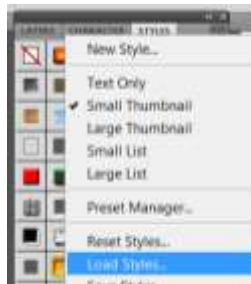

Convert to a Smart Object

Or

2. Create the style from the new file, type your letter in your new .psd file and then go to "Window>> styles", Click button on the right of the "Styles" dialog box to load the 7 Silver Styles .asl and then choose folder where the 7 Silver.asl file saved by you. and then click one of the style as you like.

"As your new file has a different dimension resolution with my 7 Silver.psd file, the style effect will be not really effective (depend on resolution), but you still can scale the effect style from "**Layer > Layer Style > Scale Effect**" you can adjust the percentage of the style and make sure the Global Light is set to **Angle =30 and Altitude = 30** you can do this by going to "**Layer >> Layer Style >> Global Light**" in the menu.

You can do this second option but i'm not recommend it, i will always choose the first option for best result.

You can apply this Style for any of your shapes in photoshop.

Please don't be hesitate to ask me a question at d.kasparov@yahoo.com.

Thx and have a great design...
