

MUSE FOR YOU - GOOEY MENU WIDGET USER GUIDE

Bringing Gooeyness to the Web.

The Gooey Menu Widget is comprised of 6 variations of the Gooey Menu. The 6th Menu gives you unlimited customization capabilities. This user Guide will go through the widget options in detail.

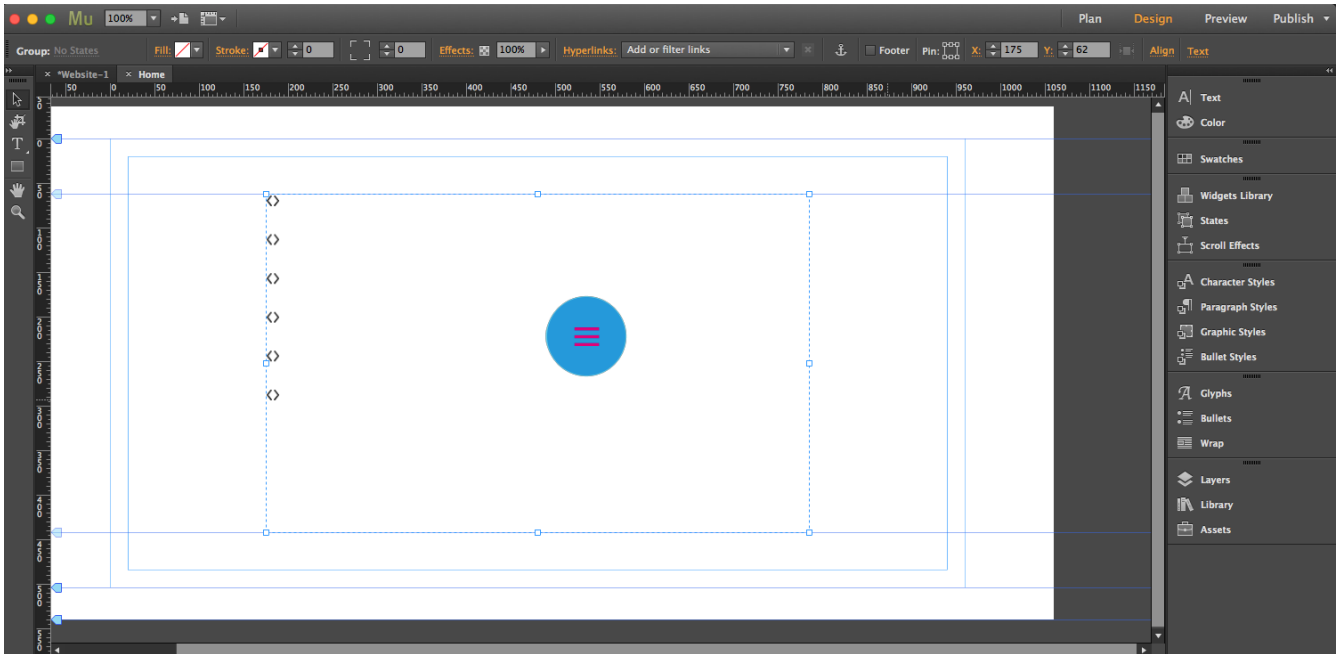

Works best on Desktop in Google Chrome.

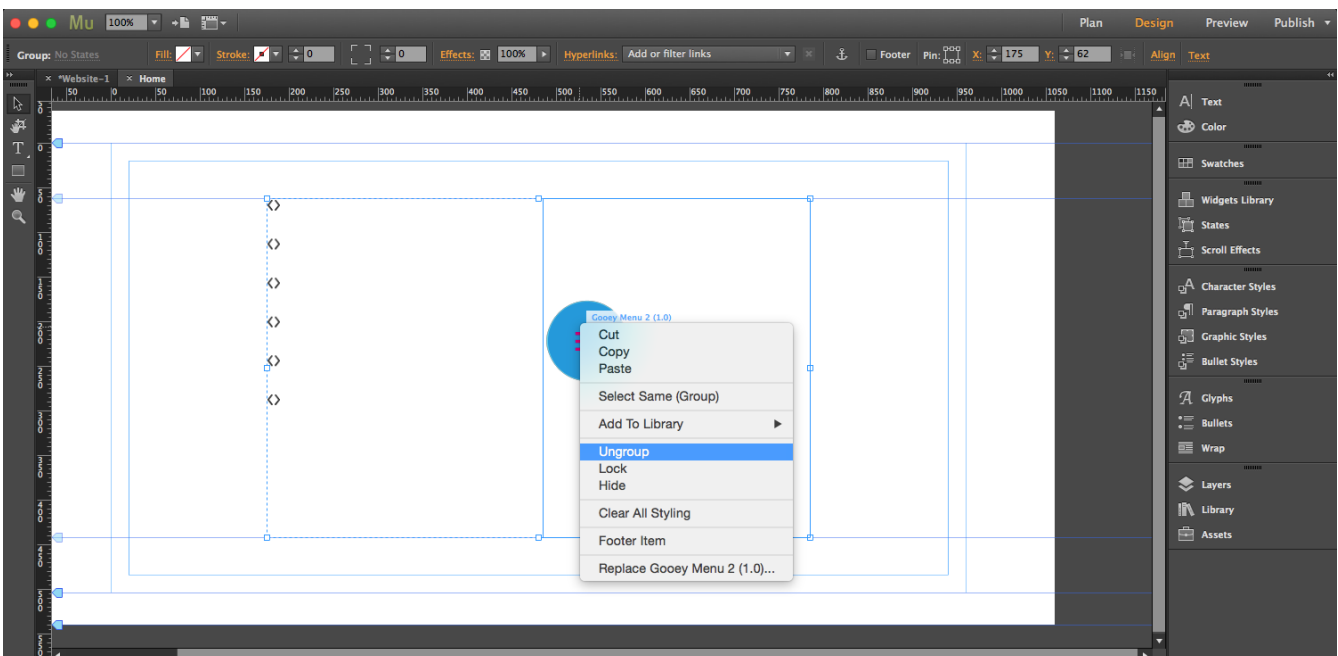

PLACING THE WIDGET

1. Place the widget onto your Adobe Muse website. At first the menu is grouped with the menu trigger and the menu button options.

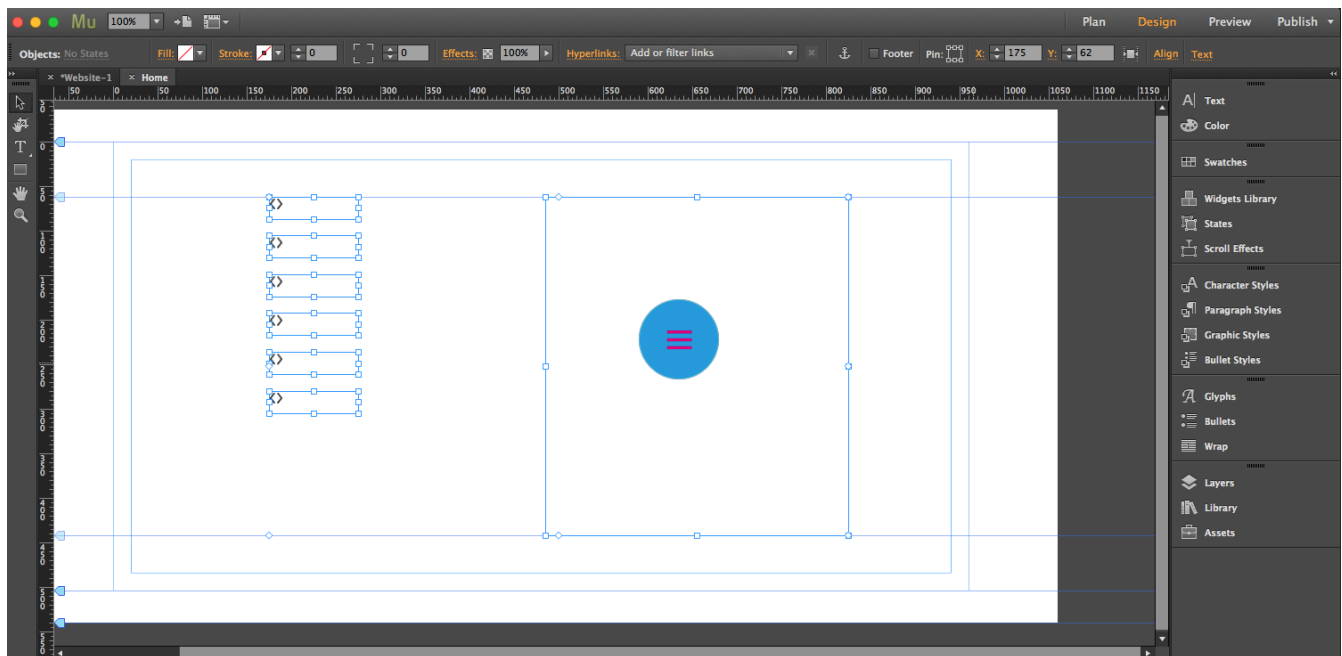

2. Ungroup the widget as to separate the menu trigger and the menu button options. This will allow for easier placement of the menu and a more organized workflow.

PLACING THE WIDGET

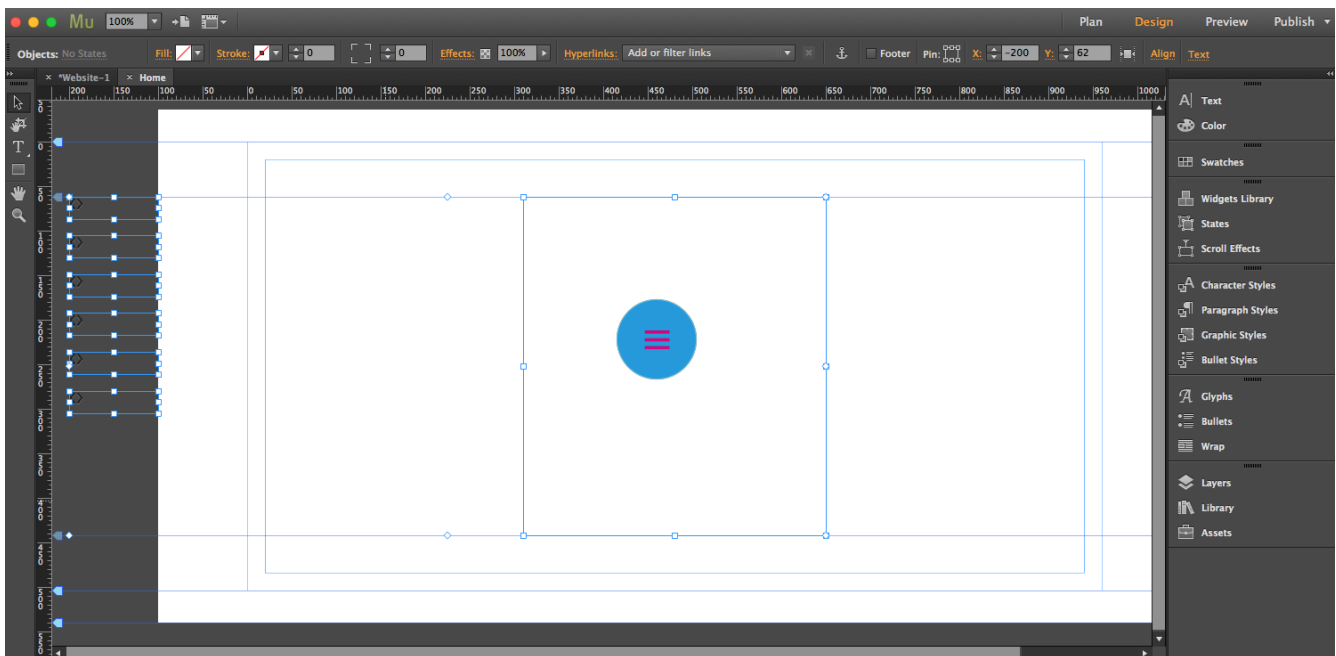

3. You are now able to move the different widget options around. The menu trigger is the one you want to focus on as that is what will determine where the menu initially starts.

PLACING THE WIDGET

4. Place the menu button options off to the left of the page as to allow for a cleaner workflow and so the menu button options do not interfere with your web design. Menu button options must be placed higher than or equal to the menu trigger in order for the widget to work correctly. Menu button options cannot be placed below the height of the menu trigger.

WIDGET OPTIONS

Menu Trigger Button (Opens Menu)

You can customize the color of the menu trigger button, the hover color of the buttons, the color of the icons, and the color of the 3 lines on the menu trigger button. You can set the size of the icons to bigger or smaller. You can make the menu lines change slower or quicker. You can change the timing of the menu trigger button.

Choose from over 500 different Font Awesome Icons! Each menu button can have its own individual icon. Social Media Icons are included in the Font Awesome library.

Enter in the URL of where you want each button to go to. Must start with `http://` -> and then the domain of where you want the button to go to.

BUTTON URL

Button 1 - URL:	<input type="text" value="#"/>
Button 2 - URL:	<input type="text" value="#"/>
Button 3 - URL:	<input type="text" value="#"/>
Button 4 - URL:	<input type="text" value="#"/>
Button 5 - URL:	<input type="text" value="#"/>
Button 6 - URL:	<input type="text" value="#"/>

INDIVIDUAL MENU BUTTON OPTIONS

Completely Customize each individual Menu Button!

Change the background color and icon color of each menu button. Change the gooeyness of the menu button by altering the button open delay and button close delay. The delay is in milliseconds. 1000 milliseconds = 1 second.

Choose whether you want that particular menu button to be visible or not. Having certain buttons visible and some not can make for a very interesting looking menu!

Once you place the widget onto your website ungroup the individual menu button options from the menu trigger button and customize to your liking. Place these options outside of the page to not interfere with the rest of the website.

In Menu 6 not only can you customize colors, icons, and timing...you can also customize the placement of the individual menu buttons.

When you alter the placement of the menu buttons sometimes the buttons go out of the range of the menu wrapper. This sometimes causes clipping of the menu buttons. You can adjust the size of the menu wrapper to avoid clipping. There are options to add more space to the top of the wrapper and to change the width and height of the wrapper.

Clipping.

Terms of Use

You can move the menu buttons on the X and Y-Axis. The X-Axis moves the button left and right. The Y-Axis moves the menu button up and down. The Y-Axis is inverted so negative values move the button up, and positive values move the button down.

That is how this menu is created.

ENJOY THE WIDGET!

This widget works best in Google Chrome. For a more in depth and detailed look at the widget visit museforyoushop.com and click on “Watch Video.” Or you can visit the Muse For You YouTube Channel.
